

Introducing  
**Tru-Cuff™**  
from AES, Inc.

# Tru-Cuff™ LM & TT

## The only inflation syringe with a cuff pressure indicator

The Tru-Cuff™ indicates pressure in endotracheal tube and laryngeal mask cuffs, minimizing the potential for airway trauma from over inflation of the cuff. The Tru-Cuff™ allows the clinician to easily inflate airways to a clinically recommended pressure with a single patient device. Easy to read color indicator bands provide you with at-a-glance feedback indicating cuff pressure, therefore improving patient safety and minimizing the risk of airway damage. The Tru-Cuff™ is available with the complete family of AES Ultra laryngeal masks or can be purchased as a stand-alone for laryngeal masks and endotracheal tubes.

# Specifications and ordering information

## Tru-Cuff™ LM + TT Ordering Info

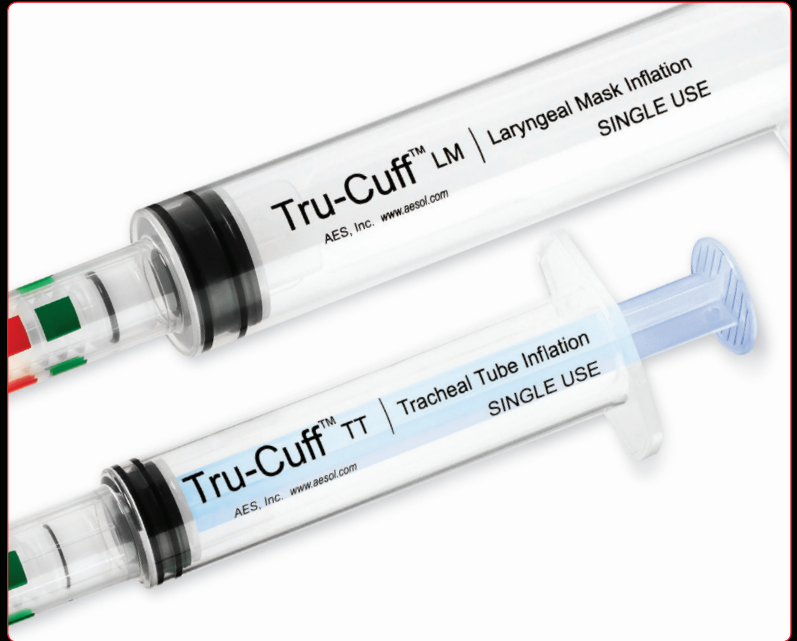

Size	Item #	Description	Packaging
LM	105004060	Laryngeal Inflation Syringe	Box of 50
TT	105002030	Endotracheal Inflation Syringe	Box of 50

## Component Material

Syringe Body	Polycarbonate
Bellows	Silicone
Plunger	Isoprene

## Pressure Range

Tru-Cuff® LM	40 – 60 cmH <sub>2</sub> O
Tru-Cuff® TT	20 – 30 cmH <sub>2</sub> O
